

ABSTRACT OF THE DISCLOSURE

A supplemental door trim that is configured to fit to an existing door molding, comprising a plurality of elongated trim sections. Each trim section has a cross-section comprising a base portion and an integral arm section. The base portion further comprises an upper base portion. The integral arm section extends from the upper base portion and is adapted to overlay an existing door molding with a setback. In one embodiment the base portion and extended arm section are integrated and define a single elongated trim section. In another embodiment the integral arm section is configured to have a flat face or a variable face to provide a more stylish look to the supplemental door trim.
